HOW KYLEENA WORKS

- How does Kyleena work?
- Does Kyleena start working right away?
- How well does Kyleena work?

MY PERIOD AFTER KYLEENA

- Will my periods change once I get Kyleena?
- What if I stop getting my period after I get Kyleena?
- What are the side effects or risks of Kyleena?

PREGNANCY

- Will I be able to get pregnant even though I have Kyleena?
- Can I try to get pregnant as soon as Kyleena is removed?
- Can I use Kyleena while breastfeeding?
- How soon can I get Kyleena after having a baby?

INDICATION FOR KYLEENA (levonorgestrel-releasing intrauterine system) 19.5 mg

Kyleena is a hormone-releasing IUD that prevents pregnancy for up to 5 years.

IMPORTANT SAFETY INFORMATION FOR KYLEENA

- If you have an untreated genital infection, get infections easily, or have certain cancers, don't use Kyleena. Less than 1% of users get a serious pelvic infection called pelvic inflammatory disease (PID).
- If you have persistent pelvic or stomach pain, excessive bleeding after placement or if Kyleena comes out, tell your healthcare professional (HCP). If Kyleena comes out, call your HCP and avoid intercourse or use non-hormonal back-up birth control (such as condoms or spermicide). Kyleena may go into or go through the uterus and cause other problems.
- Pregnancy while using Kyleena is uncommon but can be life threatening and may result in loss of pregnancy or fertility.
- Ovarian cysts may occur but usually disappear.
- Bleeding and spotting may increase in the first 3 to 6 months and remain irregular. Periods over time usually become shorter, lighter, or may stop.

Kyleena does not protect against HIV or STIs.

Only you and your HCP can decide if Kyleena is right for you.

Kyleena is available by prescription only.

For important risk and use information, please click [here](#) for Full Prescribing Information.

You are encouraged to report negative side effects or quality complaints of prescription drugs to the FDA.

Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.
